

figure-food-famine

B4: How your eating...relating to the changes in the graphic? Write a short note.

The most points of the graphic are really important to me. I perceive them and try to implement many of them in a good way.

For example: I Am a Vegetarian and with that the points: climate change, antibiotic resistant bacteria, global warming (methane → cows), deforestation for grazing and four killers: heart disease... are in some way suspended. Maybe some points more and some less.

But me and my whole family try to buy the best things like fairtrade food and ^{we} ALWAYS watch out at the label to see if there's something chemical or hormones and antibiotic.

We^{too} also try to support smaller restaurants or supermarkets. I think the last time I ate by McDonalds is 3 years ago. :)

The point: huge wastes in current food system is a big point for me first of all for my grandmom. If we don't eat everything that's on the plate, we freeze it and in restaurants we order not that much and share and if it's too less we order more.

But in a sad way not every point of the graphic can be "suspended". It is very hard to look at all of the points in being in a Industrie-System like that.
