Industrial farming is, ~~when~~ in the example of the meat production. Also so it begins in order to, the cows are pig is in a small prison she ~~have~~ can't move much. She becomes food not from the field in outside, rather from a machine. The animals work in a small corridor than ~~is~~ stand the animals shorts and become a pistol shot in the heart. The animals they are fed with a high calorie and grain diet together with antibiotics and hormones and dies cause in the meat and the human eat the meat, than eat we chemical meat.

In my opinion is, i think it is not ~~good~~ <sup>good</sup> for the ~~own~~ animals because ~~she~~ <sup>they</sup> suffer and the meat ~~is~~ tastes bad. ~~but~~ ~~the human~~ The cows ~~and~~ pigs and all other animals suffer because she have a live to die, the animals in the factorie have not ~~of~~ green grass to eat no she becomes medication and finished food. The ~~own~~ animals in the factorie ~~has~~ have not a good live and i think this is not ~~not~~ good and has to change.
