

ANIMAL FACTORIES

Animal factory has to be stopped!!!

I know animal factories also have some advantages. But overall from my point of view there are more and heavier aspects against it.

For Example:

- Annually, millions of male chicks are thrown into the shredder shortly after their birth. Because they have no use.
- In some cultivations the breast of the chicken is so heavy that it's hard for them to stand.
- Illnesses and stress alone costs million of chicken in a year there lives.
- The law provides fore one pig only 75 square centimetres to live on.
- In modern slaughterhouses around ten thousand pigs are slaughtered every day.
- By law animal has to be stunned. But that's not always certain!
- In many aspects animal factory is not good for the environment .the

But we can change something. Of cause we should not stop our whole meat consumption because it's an important component of agriculture. Nevertheless we should still look where the meat we buy comes from. And how much meat we eat and throw away.
