

1.1. He calls the age of human „Anthropocene“ and says we have made the planet ours. He also says that we are totally out of balance with nature and „unless we get our balance back, this age of humans is do to be short lived“.

2.&3. The speaker says that the biggest problem is that the planet is becoming less wild. The population of wild animals has reduced by 60% in the last 50 years and the humanity has cleared three trillion trees. Further he says that the world does not work without biodiversity and only if all species are healthy the planet can run smoothly.

4. He mentions four big points:

1. Energy revolution
2. Food revolution
3. Manage the ocean
4. Rewild the world

Also the speaker says that we should make sure „that everything we do, we can do forever.“

2. I think we should reduce the use of plastic. We also should do more to preserve the rainforest. But the most important thing is to drive electric cars instead of conventional cars or drive just not at all. And the politics should turn off the coal-fired power stations.
